

About PakaMap®

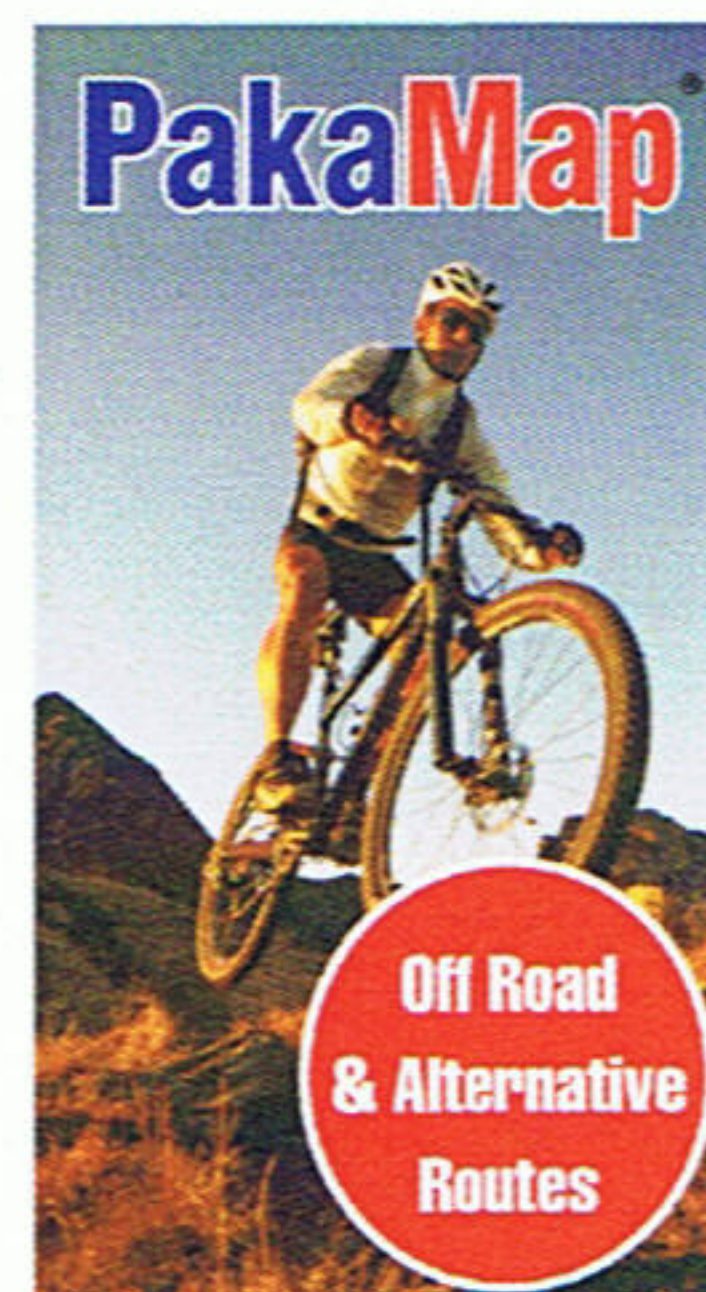

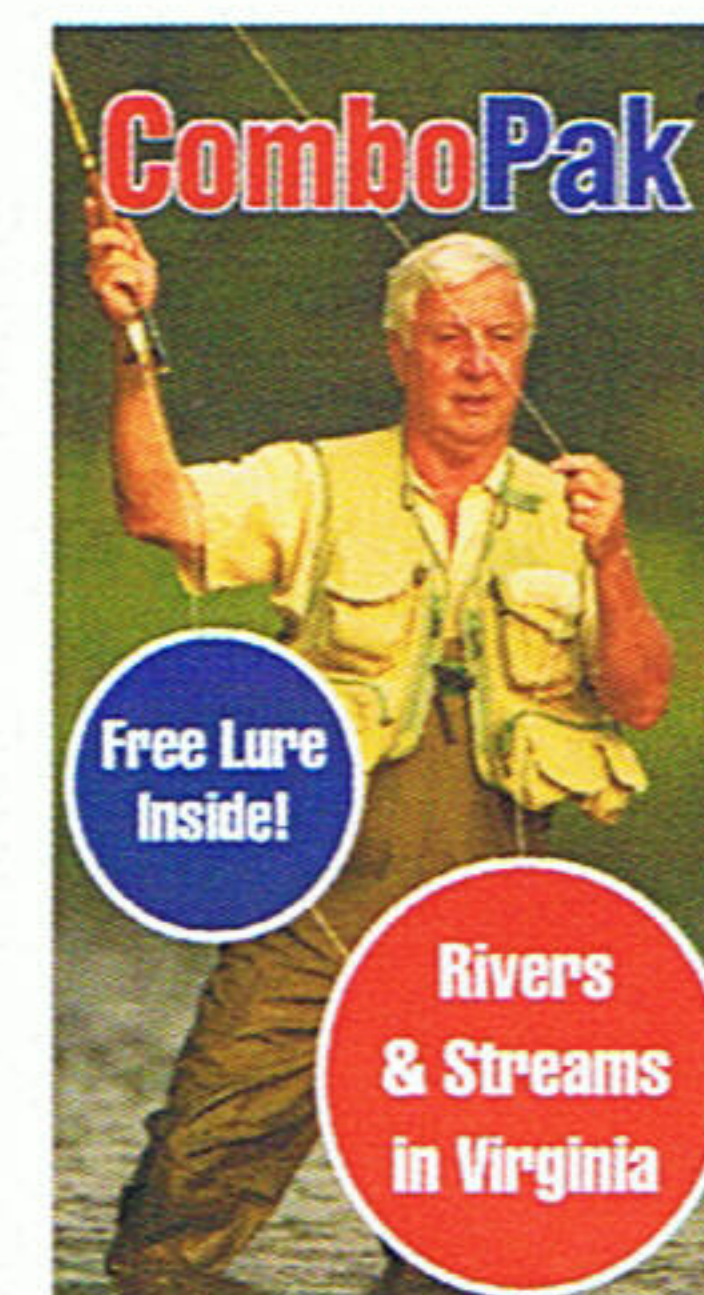

Manufactured from highly durable, waterproof and tactile polypropylene, the product is 100% recyclable.

Features and geometries simply not possible with conventional board and paper products can readily be accommodated. Designed specifically to fit into pockets, purses and handbags the use of polypropylene creates a tactile experience immediately appreciated by the recipient and a retention value difficult to surpass.

The use of high impact graphics on an attractive and differentiated substrate coupled with a simple self locking mechanism quickly arrests attention and accordingly can be employed in a huge range of applications.

The Information Vehicle

- Comfortable in all weathers and terrains
- Easy to park Customised interiors
- Good all round vision
- Quick off the marks and puts you in front of the competition
- Available in any colour (unlike the Model "T")
